Problem Statement

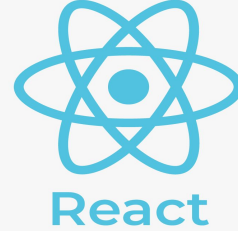

- The current process of **tracking the progress of various programs executed by BFB** is manual, hence unorganized and difficult to track
- A **dedicated portal** is required to enable the NGOs to input the progress on a monthly basis.
- For the purpose of **impact monitoring, data visualization** is required for the administrator to visualize the progress in any particular task at a given time
- **Validation of the NGO's** is not feasible

Proposed Solution

- Manage data in an organized manner.
- User-friendly portal to filter and visualize the program specific progress of the NGOs.
- Visualize progress achieved in any particular task at any given time.
- Generate reports based on KPIs.
- Pre recorded voice mail is send once the NGO gets enrolled.
